# ANNEX I SUMMARY OF PRODUCT CHARACTERISTICS

### 1. NAME OF THE VETERINARY MEDICINAL PRODUCT

Proteq West Nile suspension for injection for horses.

# 2. QUALITATIVE AND QUANTITATIVE COMPOSITION

Each dose of 1 ml contains:

#### **Active substance:**

West Nile recombinant canarypox virus (vCP2017) ...... 6.0 to 7.8 log10 CCID $^*$ <sub>50</sub> \* Cell culture infectious dose 50%

# Adjuvant:

# **Excipients:**

Qualitative composition of excipients and other constituents
Sodium chloride
Disodium phosphate dihydrate
Potassium dihydrogen phosphate
Water for injections

Homogeneous opalescent suspension.

# 3. CLINICAL INFORMATION

# 3.1 Target species

Horses

# 3.2 Indications for use for each target species

Active immunisation of horses from 5 months of age against West Nile disease by reducing the number of viraemic horses. If clinical signs are present, their duration and severity are reduced.

Onset of immunity: 4 weeks after the first dose of the primary vaccination course. In order to achieve full protection, the full vaccination course of two doses must be given.

Duration of immunity: 1 year after a full primary vaccination course of two injections.

### 3.3 Contraindications

None.

# 3.4 Special warnings

Vaccinate healthy animals only.

# 3.5 Special precautions for use

# Special precautions for safe use in the target species:

The safety of the vaccine has been demonstrated in foals from 5 months of age. However, the vaccine has also been shown to be safe in a field study including animals of 2 months of age.

Vaccination may interfere with existing sero-epidemiological surveys. However, since the IgM response following vaccination is infrequent, a positive IgM-ELISA test result is a strong indicator of natural infection with West Nile Virus. If infection is suspected as a result of a positive IgM response, additional testing would need to be conducted to conclusively determine whether the animal was infected or vaccinated.

# Special precautions to be taken by the person administering the veterinary medicinal product to animals:

In case of accidental self-injection, seek medical advice immediately and show the package leaflet or the label to the physician.

# Special precautions for the protection of the environment:

Not applicable.

#### 3.6 Adverse events

#### Horses:

Common (1 to 10 animals / 100 animals treated):	Injection site swelling <sup>1</sup>
	Injection site main increased skin temperature
Rare	Injection site pain, increased skin temperature
(1 to 10 animals / 10,000 animals treated):	Elevated temperature <sup>2</sup>
	Apathy <sup>3</sup> , decreased appetite <sup>4</sup>
	Hypersensitivity reaction <sup>5</sup>
Very rare	
(<1 animal / 10,000 animals treated, including isolated reports):	Injection site abscess

<sup>&</sup>lt;sup>1</sup> max. diameter 5 cm, which resolves within 4 days.

Reporting adverse events is important. It allows continuous safety monitoring of a veterinary medicinal product. Reports should be sent, preferably via a veterinarian, to either the marketing authorisation holder or its local representative or the national competent authority via the national reporting system. See the package leaflet for respective contact details.

# 3.7 Use during pregnancy, lactation or lay

Can be used during pregnancy and lactation.

### 3.8 Interaction with other medicinal products and other forms of interaction

No information is available on the safety and efficacy of this vaccine when used with any other veterinary medicinal product. A decision to use this vaccine before or after any other veterinary medicinal product therefore needs to be made on a case by case basis.

<sup>&</sup>lt;sup>2</sup> max. 1.5 °C, for 1 day, exceptionally 2 days.

<sup>&</sup>lt;sup>3</sup> usually resolving within two days.

<sup>&</sup>lt;sup>4</sup> the day after vaccination.

<sup>&</sup>lt;sup>5</sup> which may require appropriate symptomatic treatment.

# 3.9 Administration routes and dosage

For intramuscular use.

Shake the vaccine gently before use.

Administer one dose of 1 ml, by intramuscular injection, preferably in the neck region, according to the following schedule:

- Primary vaccination course: first injection from 5 months of age, second injection 4 to 6 weeks later.
- Revaccination: a sufficient degree of protection should be achieved after an annual booster injection with a single dose although this schedule has not been fully validated.

### 3.10 Symptoms of overdose (and where applicable, emergency procedures and antidotes)

No adverse events other than those already mentioned in section 3.6 have been observed after the administration of more than 10 doses.

# 3.11 Special restrictions for use and special conditions for use, including restrictions on the use of antimicrobial and antiparasitic veterinary medicinal products in order to limit the risk of development of resistance

Any person intending to manufacture, import, possess, distribute, sell, supply and use this veterinary medicinal product must first consult the relevant Member State's competent authority on the current vaccination policies, as these activities may be prohibited in a Member State on the whole or part of its territory pursuant to national legislation.

# 3.12 Withdrawal periods

Zero days.

### 4. IMMUNOLOGICAL INFORMATION

#### 4.1 ATC vet code:

QI05AX.

To stimulate active immunity against West Nile virus.

The vaccine strain vCP2017 is a recombinant canarypox virus expressing the preM/E genes of West Nile virus. After inoculation, the virus does not multiply in the horse but expresses the protective proteins. As a consequence, these proteins induce protective immunity against equine West Nile disease.

# 5. PHARMACEUTICAL PARTICULARS

# 5.1 Major incompatibilities

Do not mix with any other veterinary medicinal product.

#### 5.2 Shelf life

Shelf life of the veterinary medicinal product as packaged for sale: 27 months. Shelf life after first opening the immediate packaging: use immediately.

# 5.3 Special precautions for storage

Store and transport refrigerated (2  $^{\circ}$ C - 8  $^{\circ}$ C). Do not freeze. Protect from light.

# 5.4 Nature and composition of immediate packaging

Type I glass vial, with a butyl elastomer closure, sealed with an aluminium cap.

Box of 1, 2, 5 or 10 vial(s) of 1 dose. Not all pack sizes may be marketed.

# 5.5 Special precautions for the disposal of unused veterinary medicinal products or waste materials derived from the use of such products

Medicines should not be disposed of via wastewater or household waste.

Use take-back schemes for the disposal of any unused veterinary medicinal product or waste materials derived thereof in accordance with local requirements and with any national collection systems applicable to the veterinary medicinal product concerned.

### 6. NAME OF THE MARKETING AUTHORISATION HOLDER

Boehringer Ingelheim Vetmedica GmbH

# 7. MARKETING AUTHORISATION NUMBER(S)

EU/2/11/129/001-004

### 8. DATE OF FIRST AUTHORISATION

Date of first authorisation: 05/08/2011

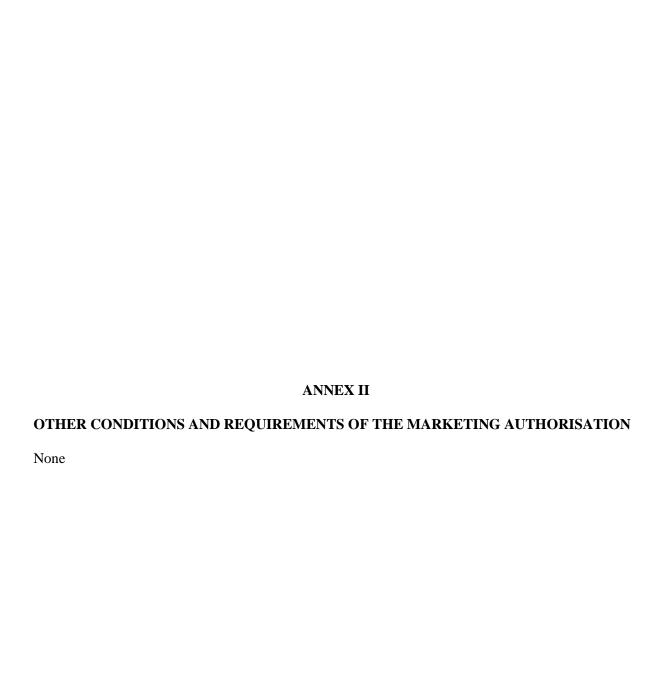

# 9. DATE OF THE LAST REVISION OF THE SUMMARY OF THE PRODUCT CHARACTERISTICS

{MM/YYYY}

### 10. CLASSIFICATION OF VETERINARY MEDICINAL PRODUCTS

Veterinary medicinal product subject to prescription.

Detailed information on this veterinary medicinal product is available in the Union Product Database (https://medicines.health.europa.eu/veterinary).

B. PACKAGE LEAFLET

#### PACKAGE LEAFLET

# 1. Name of the veterinary medicinal product

Proteq West Nile suspension for injection for horses

2.	Comp	osition
	COLLED	ODILIUII

Each dose of 1 ml contains:

# **Active substance:**

# Adjuvant:

Homogeneous opalescent suspension.

# 3. Target species

Horses.

## 4. Indications for use

Active immunisation of horses from 5 months of age against West Nile disease by reducing the number of viraemic horses. If clinical signs are present, their duration and severity are reduced.

Onset of immunity: 4 weeks after the first dose of the primary vaccination course. In order to achieve full protection, the full vaccination course of two doses must be given.

Duration of immunity: 1 year after a full primary vaccination course of two injections.

## 5. Contraindications

None.

# 6. Special warnings

Vaccinate healthy animals only.

Special precautions for safe use in the target species:

The safety of the vaccine has been demonstrated in foals from 5 months of age. However, the vaccine has also been shown to be safe in a field study including animals of 2 months of age.

Vaccination may interfere with existing sero-epidemiological surveys. However, since the IgM response following vaccination is infrequent, a positive IgM-ELISA test result is a strong indicator of natural infection with West Nile Virus. If infection is suspected as a result of a positive IgM response, additional testing would need to be conducted to conclusively determine whether the animal was infected or vaccinated.

# Special precautions to be taken by the person administering the veterinary medicinal product to animals:

In case of accidental self-injection, seek medical advice immediately and show the package leaflet or the label to the physician.

# Pregnancy and lactation:

This vaccine can be used during pregnancy and lactation.

# <u>Interaction</u> with other medicinal products and other forms of interaction:

No information is available on the safety and efficacy of this vaccine when used with any other veterinary medicinal product. A decision to use this vaccine before or after any other veterinary medicinal product therefore needs to be made on a case by case basis.

#### Overdose:

No adverse events other than those already mentioned in the section "Adverse events" have been observed after the administration of more than 10 doses.

## Special restrictions for use and special conditions for use:

Any person intending to manufacture, import, possess, distribute, sell, supply and use this veterinary medicinal product must first consult the relevant Member State's competent authority on the current vaccination policies, as these activities may be prohibited in a Member State on the whole or part of its territory pursuant to national legislation.

# Major incompatibilities:

Do not mix with any other veterinary medicinal product.

### 7. Adverse events

#### Horses:

**Common** (1 to 10 animals / 100 animals treated):

Injection site swelling<sup>1</sup>

**Rare** (1 to 10 animals / 10,000 animals treated):

Injection site pain, increased skin temperature

Elevated temperature<sup>2</sup>

Apathy<sup>3</sup>, decreased appetite<sup>4</sup>

Hypersensitivity reaction<sup>5</sup>

**Very rare** (<1 animal / 10,000 animals treated, including isolated reports):

Injection site abscess

Reporting adverse events is important. It allows continuous safety monitoring of a product. If you notice any side effects, even those not already listed in this package leaflet, or you think that the medicine has not worked, please contact, in the first instance, your veterinarian. You can also report any adverse events to the marketing authorisation holder or the local representative of the marketing authorisation holder using the contact details at the end of this leaflet, or via your national reporting system: {national system details}.

<sup>&</sup>lt;sup>1</sup> max. diameter 5 cm, which resolves within 4 days.

<sup>&</sup>lt;sup>2</sup> max. 1.5 °C, for 1 day, exceptionally 2 days.

<sup>&</sup>lt;sup>3</sup> usually resolving within two days.

<sup>&</sup>lt;sup>4</sup> the day after vaccination.

<sup>&</sup>lt;sup>5</sup> which may require appropriate symptomatic treatment.

# 8. Dosage for each species, routes and method of administration

For intramuscular use.

Administer one dose of 1 ml, by intramuscular injection, preferably in the neck region, according to the following schedule:

- Primary vaccination course: first injection from 5 months of age, second injection 4 to 6 weeks later.
- Revaccination: a sufficient degree of protection should be achieved after an annual booster injection with a single dose although this schedule has not been fully validated.

# 9. Advice on correct administration

Shake the vaccine gently before use.

# 10. Withdrawal periods

Zero days.

# 11. Special storage precautions

Keep out of the sight and reach of children.

Store and transport refrigerated (2 °C - 8 °C).

Do not freeze.

Protect from light.

Do not use this veterinary medicinal product after the expiry date which is stated on the label after Exp.

Shelf life after first opening the immediate packaging: use immediately.

# 12. Special precautions for disposal

Medicines should not be disposed of via wastewater or household waste.

Use take-back schemes for the disposal of any unused veterinary medicinal product or waste materials derived thereof in accordance with local requirements and with any applicable national collection systems. These measures should help to protect the environment.

Ask your veterinary surgeon how to dispose of medicines no longer required.

# 13. Classification of veterinary medicinal products

Veterinary medicinal product subject to prescription.

# 14. Marketing authorisation numbers and pack sizes

EU/2/11/129/001-004

Box of 1, 2, 5 or 10 vial(s) of 1 dose.

Not all pack sizes may be marketed.

# 15. Date on which the package leaflet was last revised

{MM/YYYY}

Detailed information on this veterinary medicinal product is available in the Union Product Database (https://medicines.health.europa.eu/veterinary).
