

**ANNEX I**

**SUMMARY OF PRODUCT CHARACTERISTICS**

## 1. NAME OF THE VETERINARY MEDICINAL PRODUCT

Frontline Combo 50.00 mg / 60.00 mg spot-on solution for cat

## 2. QUALITATIVE AND QUANTITATIVE COMPOSITION

Each pipette of 0.5 ml contains:

### Active substances:

Fipronil ..... 50.00 mg  
(S)-methoprene ..... 60.00 mg

### Excipients:

Qualitative composition of excipients and other constituents	Quantitative composition if that information is essential for proper administration of the veterinary medicinal product
<i>Butylhydroxyanisole (E320)</i>	<i>0.10 mg</i>
<i>Butylhydroxytoluene (E321)</i>	<i>0.05 mg</i>
<i>Ethanol</i>	
<i>Polysorbate 80 (E433)</i>	
<i>Polyvidone</i>	
<i>Diethylene glycol monoethyl ether</i>	

Clear amber spot-on solution.

## 3. CLINICAL INFORMATION

### 3.1 Target species

Cats and ferrets.

### 3.2 Indications for use, for each target species

In cats:

To be used against infestations with fleas, alone or in association with ticks and/or biting lice.

- Elimination of fleas (*Ctenocephalides* spp.). Insecticidal efficacy against new infestations with adult fleas persists for 4 weeks. Prevention of the multiplication of fleas by inhibiting the development of eggs (ovicidal activity), larvae and pupae (larvicidal activity) originating from eggs laid by adult fleas for six weeks after application.
- Elimination of ticks (*Ixodes ricinus*, *Dermacentor variabilis*, *Rhipicephalus sanguineus*). The veterinary medicinal product has a persistent acaricidal efficacy for up to 2 weeks against ticks (based on experimental data).
- Elimination of biting lice (*Felicola subrostratus*).

The veterinary medicinal product can be used as part of a treatment strategy for the control of Flea Allergy Dermatitis (FAD).

In ferrets:

To be used against infestations with fleas, alone or in association with ticks.

- Elimination of fleas (*Ctenocephalides* spp.). Insecticidal efficacy against new infestations with adult fleas persists for 4 weeks. Prevention of the multiplication of fleas by inhibiting the development of eggs (ovicidal activity), larvae and pupae (larvicidal activity) originating from eggs laid by adult fleas.
- Elimination of ticks (*Ixodes ricinus*). The veterinary medicinal product has a persistent acaricidal efficacy for 4 weeks against ticks (based on experimental data).

### 3.3 Contraindications

In the absence of available data, the veterinary medicinal product should not be used on kittens less than 8 weeks old and/or weighing less than 1 kg. The veterinary medicinal product should not be used on ferrets less than 6 months old.

**Do not use in rabbits, as adverse drug reactions with even mortality could occur.** In absence of studies, the use of the veterinary medicinal product is not recommended in non-target species.

Do not use on sick (e.g. systemic diseases, fever) or convalescent animals.

Do not use in cases of hypersensitivity to the active substances or to any of the excipients.

### 3.4 Special warnings

Unnecessary use of antiparasitics or use deviating from the instructions given in the SPC may increase the resistance selection pressure and lead to reduced efficacy. The decision to use the product should be based on confirmation of the parasitic species and burden, or of the risk of based on its epidemiological features, for each individual animal.

No data on the effect of bathing/shampooing on the efficacy of the veterinary medicinal product in cats and ferrets are available. However, based on information available for dogs shampooed as from 2 days after application of the veterinary medicinal product, it is not recommended to bath animals within 2 days after application of the veterinary medicinal product.

There may be an attachment of single ticks. For this reason a transmission of infectious diseases cannot be completely excluded if conditions are unfavourable.

Fleas from pets often infest the animal's basket, bedding and regular resting areas such as carpets and soft furnishings which should be treated, in case of massive infestation and at the beginning of the control measures, with a suitable insecticide and vacuumed regularly.

Other animals living in the same household should also be treated with a suitable product.

### 3.5 Special precautions for use

Special precautions for safe use in the target species:

Avoid the contact with the animal's eyes.

It is important to make sure that the veterinary medicinal product is applied to an area where the animal cannot lick it off and to make sure that animals do not lick each other following treatment.

The potential toxicity of the veterinary medicinal product for kittens of less than 8 weeks of age in contact with a treated queen is not documented. Special care should be taken in this case.

Special precautions to be taken by the person administering the veterinary medicinal product to animals:

This veterinary medicinal product can cause mucous membrane, skin and eye irritation. Therefore, contact of the veterinary medicinal product with mouth, skin and eyes should be avoided.

People with a known hypersensitivity to fipronil or (S)-methoprene, or alcohol should avoid contact with the veterinary medicinal product. Avoid contents coming into contact with the fingers. If this occurs, wash hands with soap and water.

After accidental exposure the eye should be rinsed carefully with pure water.

Wash hands after use.

Treated animals should not be handled until the application site is dry, and children should not be allowed to play with treated animals until the application site is dry. It is therefore recommended that animals are not treated during the day, but should be treated during the early evening, and that recently treated animals are not allowed to sleep with owners, especially children.

Do not smoke, drink or eat during application.

#### Special precautions for the protection of the environment:

See section 5.5.

### **3.6 Adverse events**

Cats and Ferrets:

Very rare ( $< 1$ animal / 10,000 animals treated, including isolated reports):	Application site reactions (skin scaling <sup>1</sup> , hair loss <sup>1</sup> , itching <sup>1</sup> , reddening <sup>1</sup> ).  Generalised itching or hair loss.  Hypersalivation <sup>2</sup> , vomiting.  Increased sensitivity to stimulation <sup>3</sup> , depression <sup>3</sup> , other nervous signs <sup>3</sup> .
--	--

<sup>1</sup> Transient

<sup>2</sup> If licking occurs, a brief period of hypersalivation may be observed due mainly to the nature of the carrier.

<sup>3</sup> Reversible

Reporting adverse events is important. It allows continuous safety monitoring of a veterinary medicinal product. Reports should be sent, preferably via a veterinarian, to either the marketing authorisation holder or its local representative or the national competent authority via the national reporting system. See the package leaflet for respective contact details.

### **3.7 Use during pregnancy, lactation or lay**

Laboratory studies in cats have not produced any evidence of teratogenic, foetotoxic or maternotoxic effects.

#### Pregnancy and lactation:

Cats:

Can be used during pregnancy.

For treatment during the lactating period, see section 3.5.

Ferrets:

The safety of the veterinary medicinal product has not been established in ferrets during pregnancy and lactation. Use only according to the risk-benefit assessment by the responsible veterinarian.

### **3.8 Interaction with other medicinal products and other forms of interaction**

None known.

### **3.9 Administration routes and dosage**

Spot-on use.

Underdosing could result in ineffective use and may favour resistance development.

Cats:

The minimum dose is 5 mg/kg bw of fipronil and 6 mg/kg bw of (S)-methoprene, corresponding to one pipette of 0.5 ml per cat. In the absence of safety studies, the minimum treatment interval is 4 weeks.

Ferrets:

The dose is 50 mg of fipronil and 60 mg of (S)-methoprene per ferret, corresponding to one pipette of 0.5 ml per ferret. The minimum treatment interval is 4 weeks.

For infestations with fleas and/or ticks, the need for and frequency of re-treatment(s) should be based on professional advice and should take into account the local epidemiological situation and the animal's lifestyle.

#### Method of administration:

Hold the pipette upright. Tap the narrow part of the pipette to ensure the contents remain within the main body of the pipette. Snap back the tip. Part the coat on the back of the animal at the base of the neck in front of the shoulder blades until the skin is visible. Place the tip of the pipette on the skin and squeeze the pipette several times to empty its contents completely and directly onto the skin in one spot.

### **3.10 Symptoms of overdose (and where applicable, emergency procedures and antidotes)**

Do not overdose.

The risk of experiencing adverse events may increase when overdosing (see section 3.6).

In cats:

No adverse events were observed in target animal safety studies in cats and kittens aged 8 weeks and older and weighing about 1 kg treated once a month at five times the recommended dose for six consecutive months.

Itching may occur following treatment.

Overdose application of the veterinary medicinal product will cause a sticky appearance of hairs at the treatment spot. However, should this occur, it will disappear within 24 hours post application.

In ferrets:

In ferrets aged 6 months and older and treated once every 2 weeks for four treatments, at five times the recommended dose, body weight loss was observed in some animals.

### **3.11 Special restrictions for use and special conditions for use, including restrictions on the use of antimicrobial and antiparasitic veterinary medicinal products in order to limit the risk of development of resistance**

Not applicable.

### 3.12 Withdrawal periods

Not applicable.

## 4. PHARMACOLOGICAL INFORMATION

### 4.1 ATC vet code: QP53AX65

The veterinary medicinal product is an insecticidal and acaricidal solution for topical use, containing an association of an adulticidal active ingredient, fipronil, in combination with an ovicidal and larvicidal active ingredient, (S)-methoprene.

### 4.2 Pharmacodynamics

**Fipronil** is an insecticide and acaricide belonging to the phenylpyrazole family. It acts by interacting with ligand-gated chloride channels, in particular those gated by the neurotransmitter gamma-aminobutyric acid (GABA), thereby blocking pre- and post-synaptic transfer of chloride ions across cell membranes. This results in uncontrolled activity of the central nervous system and death of insects or acarines. Fipronil kills fleas within 24 hours, ticks (*Dermacentor variabilis*, *Rhipicephalus sanguineus*, *Ixodes scapularis*, *Ixodes ricinus*, *Haemaphysalis longicornis*, *Haemaphysalis flava*, *Haemaphysalis campanulata*) and lice within 48 hours post-exposure.

**(S)-Methoprene** is an insect growth regulator (IGR) of the class of compounds known as juvenile hormone analogues that inhibit the development of immature stages of insects. This compound mimics the action of juvenile hormone and causes impaired development and death of the developing stages of fleas. The on-animal ovicidal activity of (S)-methoprene results from either direct penetration of the eggshell of newly laid eggs or from absorption through the cuticle of the adult fleas. (S)-methoprene is also effective in preventing flea larvae and pupae from developing, which prevents contamination of the environment of treated animals with the immature stages of fleas.

### 4.3 Pharmacokinetics

Studies of metabolism of fipronil have demonstrated that the major metabolite is the sulfone derivative of fipronil.

(S)-methoprene is extensively degraded into carbon dioxide and acetate that are subsequently incorporated into endogenous materials.

The pharmacokinetic profiles after topical application of fipronil and (S)-methoprene in combination were studied in cats in comparison to intravenous dosing of fipronil or (S)-methoprene alone. This established absorption and other pharmacokinetic parameters under conditions mimicking clinical practice. The topical application, with additional potential oral exposure from licking, resulted in overall systemic absorption of fipronil (18%) with a mean maximum concentration ( $C_{\max}$ ) of approximately 100 ng/ml fipronil and 13 ng/ml of fipronil sulfone in plasma.

Peak fipronil plasma concentrations are rapidly attained (mean  $t_{\max}$  approximately 6 h) and decline with a mean terminal half-life of approximately 25 h.

Fipronil is slightly metabolised to fipronil sulfone in cats.

Plasma concentrations of (S)-methoprene were generally below the limit of quantitation (20 ng/ml) in cats after topical application.

Both (S)-methoprene and fipronil, together with its major metabolite, are well-distributed in the haircoat of cats within one day after application. The concentrations of fipronil, fipronil sulfone and (S)-methoprene in the hair coat decrease with time and are detectable for at least 59 days after dosing. Parasites are killed through contact rather than by systemic exposure.

No pharmacological interaction between fipronil and (S)-methoprene was noted.

The pharmacokinetic profile of the veterinary medicinal product has not been investigated in ferrets.

## **5. PHARMACEUTICAL PARTICULARS**

### **5.1 Major incompatibilities**

None known.

### **5.2 Shelf life**

Shelf life of the veterinary medicinal product as packaged for sale: 3 years.

### **5.3 Special precautions for storage**

Do not store above 25°C. Store in the original package.

### **5.4 Nature and composition of immediate packaging**

#### Nature of primary packaging

A green pipette composed of a heat-formed shell (polyacrylonitrile-methyl acrylate copolymer / polypropylene) and a film (polyacrylonitrile-methyl acrylate copolymer / aluminium / polyethylene terephthalate).

Or

A green pipette composed of a heat-formed shell (polyethylene / ethylene vinyl alcohol / polyethylene / polypropylene / cyclic-olefin-copolymer / polypropylene) and a film (polyethylene / ethylene vinyl alcohol / polyethylene / aluminium / polyethylene terephthalate).

#### Sales presentation(s)

Blister card of 1 x 0.5 ml pipette with a scored tip

Box of 1 blister card of 3 x 0.5 ml pipettes with a scored tip

Box of 1 blister card of 4 x 0.5 ml pipettes with a scored tip

Box of 2 blister cards of 3 x 0.5 ml pipettes with a scored tip

Not all pack sizes may be marketed.

### **5.5 Special precautions for the disposal of unused veterinary medicinal product or waste materials derived from the use of such products**

Medicines should not be disposed of via wastewater or household waste.

The veterinary medicinal product should not enter water courses as fipronil and (S)-methoprene may be dangerous for fish and other aquatic organisms. Do not contaminate ponds, waterways or ditches with the veterinary medicinal product or empty containers.

Use take-back schemes for the disposal of any unused veterinary medicinal product or waste materials derived thereof in accordance with local requirements and with any national collection systems applicable to the veterinary medicinal product concerned.

## **6. NAME OF THE MARKETING AUTHORISATION HOLDER**

Ferrets

**5. INDICATIONS FOR USE**

**Indications for use**

In cats:

To be used against infestations with fleas, alone or in association with ticks and/or biting lice.

- Elimination of fleas (*Ctenocephalides* spp.). Insecticidal efficacy against new infestations with adult fleas persists for 4 weeks. Prevention of the multiplication of fleas by inhibiting the

- development of eggs (ovicidal activity), larvae and pupae (larvicidal activity) originating from eggs laid by adult fleas for six weeks after application.
- Elimination of ticks (*Ixodes ricinus*, *Dermacentor variabilis*, *Rhipicephalus sanguineus*). The product has a persistent acaricidal efficacy for up to 2 weeks against ticks (based on experimental data).
- Elimination of biting lice (*Felicola subrostratus*).

The product can be used as part of a treatment strategy for the control of Flea Allergy Dermatitis (FAD).

In ferrets:

To be used against infestations with fleas, alone or in association with ticks.

- Elimination of fleas (*Ctenocephalides* spp.). Insecticidal efficacy against new infestations with adult fleas persists for 4 weeks. Prevention of the multiplication of fleas by inhibiting the development of eggs (ovicidal activity), larvae and pupae (larvicidal activity) originating from eggs laid by adult fleas.
- Elimination of ticks (*Ixodes ricinus*). The product has a persistent acaricidal efficacy for 4 weeks against ticks (based on experimental data).

Fipronil kills fleas within 24 hours and ticks and lice within 48 hours post-exposure.

## 6. CONTRAINDICATIONS

### Contraindications

In the absence of available data, the product should not be used on kittens less than 8 weeks old and/or weighing less than 1 kg. The product should not be used in ferrets less than 6 months old.

Do not use in rabbits, as adverse drug reactions with even mortality could occur. In absence of studies, the use of the product is not recommended in non-target species.

Do not use on sick (e.g. systemic diseases, fever) or convalescent animals.

Do not use in cases of hypersensitivity to the active substances or to any of the excipients.

## 7. SPECIAL WARNINGS

### Special warnings

For external use only.

Unnecessary use of antiparasitics or use deviating from the instructions given in the SPC may increase the resistance selection pressure and lead to reduced efficacy. The decision to use the product should be based on confirmation of the parasitic species and burden, or of the risk of based on its epidemiological features, for each individual animal.

No data on the effect of bathing/shampooing on the efficacy of the product in cats and ferrets are available. However, based on information available for dogs shampooed as from 2 days after application of the product, it is not recommended to bath animals within 2 days after application of the product.

There may be an attachment of single ticks. For this reason a transmission of infectious diseases cannot be completely excluded if conditions are unfavourable.

Fleas from pets often infest the animal's basket, bedding and regular resting areas such as carpets and soft furnishings which should be treated, in case of massive infestation and at the beginning of the control measures, with a suitable insecticide and vacuumed regularly.

Other animals living in the same household should also be treated with a suitable product.

Special precautions for safe use in the target species:

Avoid the contact with the animal's eyes.

It is important to make sure that the product is applied to an area where the animal cannot lick it off and to make sure that animals do not lick each other following treatment.

The potential toxicity of the product for kittens of less than 8 weeks of age in contact with a treated queen is not documented. Special care should be taken in this case.

Special precautions to be taken by the person administering the veterinary medicinal product to animals:

This product can cause mucous membrane, skin and eye irritation. Therefore, contact of the product with mouth, skin and eyes should be avoided.

People with a known hypersensitivity to fipronil or (S)-methoprene, or alcohol should avoid contact with the veterinary medicinal product. Avoid contents coming into contact with the fingers. If this occurs, wash hands with soap and water.

After accidental exposure the eye should be rinsed carefully with plain water.

Wash hands after use.

Treated animals should not be handled until the application site is dry, and children should not be allowed to play with treated animals until the application site is dry. It is therefore recommended that animals are not treated during the day, but should be treated during the early evening, and that recently treated animals are not allowed to sleep with owners, especially children.

Do not smoke, drink or eat during application.

Special precautions for the protection of the environment:

See section "Special precautions for disposal".

Pregnancy and lactation:

The veterinary medicinal product can be used during pregnancy in cats. For treatment during the lactating period, see above.

Use only according to benefit/risk assessment by a responsible veterinarian in ferrets.

Overdose:

Do not overdose.

The risk of experiencing adverse events may however increase when overdosing (see Adverse Events).

**Cats:**

No adverse events were observed in target animal safety studies in cats and kittens aged 8 weeks and older and weighing about 1 kg treated once a month at five times the recommended dose for six consecutive months.

Itching may occur following treatment.

Overdose application of the product will cause a sticky appearance of hairs at the treatment spot.

However, should this occur, it will disappear within 24 hours post application.

**Ferrets:**

In ferrets aged 6 months and older and treated once every 2 weeks for four treatments, at five times the recommended dose, body weight loss was observed in some animals.

<b>8. ADVERSE EVENTS</b>
--------------------------

**Adverse events**

**Cats and Ferrets:**

**Very rare (<1 animal / 10,000 animals treated, including isolated reports):**

Application site reactions (skin scaling<sup>1</sup>, hair loss<sup>1</sup>, itching<sup>1</sup>, reddening<sup>1</sup>). Generalised itching or hair loss. Hypersalivation<sup>2</sup>, vomiting. Increased sensitivity to stimulation<sup>3</sup>, depression<sup>3</sup>, other nervous signs<sup>3</sup>.

<sup>1</sup> Transient

<sup>2</sup> If licking occurs, a brief period of hypersalivation may be observed due mainly to the nature of the carrier.

<sup>3</sup> Reversible

Reporting adverse events is important. It allows continuous safety monitoring of a product. If you notice any side effects, even those not already listed on this label, or you think that the medicine has not worked, please contact, in the first instance, your veterinarian. You can also report any adverse events to the marketing authorisation holder or the local representative of the marketing authorisation holder using the contact details on this label, or via your national reporting system: {national system details}.

## **9. DOSAGE FOR EACH TARGET SPECIES, ROUTES AND METHOD OF ADMINISTRATION**

### **Dosage for each species, routes and method of administration**

Spot-on use

Underdosing could result in ineffective use and may favour resistance development.

Cats:

The minimum dose is 5 mg/kg bw of fipronil and 6 mg/kg bw of (S)-methoprene, corresponding to one pipette of 0.5 ml per cat.

Ferrets:

The dose is 50 mg of fipronil and 60 mg of (S)-methoprene per ferret, corresponding to one pipette of 0.5 ml per ferret. For infestations with fleas and/or ticks, the need for and frequency of re-treatment(s) should be based on professional advice and should take into account the local epidemiological situation and the animal's lifestyle.

## **10. ADVICE ON CORRECT ADMINISTRATION**

### **Advice on correct administration**

1-Take the pipette out of its packaging

2- Hold the pipette upright. Tap the narrow part of the pipette to ensure the contents remain within the main body of the pipette. Snap back the tip.

3-Part the coat on the back of the animal at the base of the neck in front of the shoulder blades until the skin is visible. Place the tip of the pipette on the skin and squeeze the pipette several times to empty its contents completely and directly onto the skin in one spot.

## **11. WITHDRAWAL PERIODS**

**Withdrawal periods:** not applicable.

## **12. SPECIAL STORAGE PRECAUTIONS**

### **Special storage precautions**

Do not store above 25°C. Store in the original package.

Keep out of the sight and reach of children.

**Do not use this veterinary medicinal product after the expiry date which is stated on the carton after Exp. The expiry date refers to the last day of that month.**

### **13. SPECIAL PRECAUTIONS FOR DISPOSAL**

#### **Special precautions for disposal**

Medicines should not be disposed of via wastewater or household waste.

This veterinary medicinal product should not enter water courses as fipronil and (S)-methoprene may be dangerous for fish and other aquatic organisms. Do not contaminate ponds, waterways or ditches with the product or empty containers.

Use take-back schemes for the disposal of any unused veterinary medicinal product or waste materials derived thereof in accordance with local requirements and with any applicable national collection systems. These measures should help to protect the environment.

Ask your veterinary surgeon or pharmacist how to dispose of medicines no longer required.

### **14. CLASSIFICATION OF VETERINARY MEDICINAL PRODUCTS**

#### **Classification of veterinary medicinal products**

AT, BG, CZ, DE, DK, ES, ET, FI, FR, HR, HU, IT, LT, LV, MT, NL, PL, PT, RO, SI, SK, SV:  
Veterinary medicinal product not subject to prescription.

CY, GR, IE, NO, UK(NI):

Ferrets

### **5. INDICATIONS**

**For products not subject to veterinary prescription:**

Eliminates fleas on your cat and protects against re-infestation for 4 weeks.

Inhibits the development of flea eggs, flea larvae and pupae (for 6 weeks in cats), thus preventing contamination of your pet's environment for the same period.

Eliminates ticks on your cat and protects against re-infestation for up to 2 weeks.

Eliminates biting lice on your cat.

Can be used as part of a treatment strategy for the control of Flea Allergy Dermatitis (FAD) in cats. Prevents contamination of the environment of treated animals with the immature stages of fleas.

Eliminates fleas on your ferret and protects against re-infestation for 4 weeks.

Eliminates ticks on your ferret and protects against re-infestation for up to 4 weeks.

## **B. PACKAGE LEAFLET**

## PACKAGE LEAFLET

Box of 3 pipettes

Box of 4 pipettes

Box of 6 pipettes

The leaflet described below applies to Case N°2 where a package leaflet is added in the packaging.

In Case N°1 no leaflet is needed.

### 1. Name of the veterinary medicinal product

Frontline Combo 50.00 mg / 60.00 mg spot-on solution for cat

### 2. Composition

Each 0.5 ml pipette contains:

#### Active substances:

Fipronil ..... 50.00 mg

(S)-methoprene ..... 60.00 mg

#### Excipients:

Butylhydroxyanisole (E320) ..... 0.10 mg

Butylhydroxytoluene (E321) ..... 0.05 mg

Clear amber spot-on solution.

### 3. Target species

Cats, Ferrets.

### 4. Indications for use

In cats:

To be used against infestations with fleas, alone or in association with ticks and/or biting lice.

- Elimination of fleas (*Ctenocephalides* spp.). Insecticidal efficacy against new infestations with adult fleas persists for 4 weeks. Prevention of the multiplication of fleas by inhibiting the development of eggs (ovicidal activity), larvae and pupae (larvicidal activity) originating from eggs laid by adult fleas for six weeks after application.
- Elimination of ticks (*Ixodes ricinus*, *Dermacentor variabilis*, *Rhipicephalus sanguineus*). The product has a persistent acaricidal efficacy for up to 2 weeks against ticks (based on experimental data).
- Elimination of biting lice (*Felicola subrostratus*).

The product can be used as part of a treatment strategy for the control of Flea Allergy Dermatitis (FAD).

In ferrets:

To be used against infestations with fleas, alone or in association with ticks.

- Elimination of fleas (*Ctenocephalides* spp.). Insecticidal efficacy against new infestations with adult fleas persists for 4 weeks. Prevention of the multiplication of fleas by inhibiting the development of eggs (ovicidal activity), larvae and pupae (larvicidal activity) originating from eggs laid by adult fleas.
- Elimination of ticks (*Ixodes ricinus*). The product has a persistent acaricidal efficacy for 4 weeks against ticks (based on experimental data).

## **5. Contraindications**

In the absence of available data, the product should not be used on kittens less than 8 weeks old and/or weighing less than 1 kg. The product should not be used in ferrets less than 6 months old.

Do not use in rabbits, as adverse drug reactions with even mortality could occur. In absence of studies, the use of the product is not recommended in non-target species.

Do not use on sick (e.g. systemic diseases, fever) or convalescent animals.

Do not use in cases of hypersensitivity to the active substances or to any of the excipients.

## **6. Special warnings**

Unnecessary use of antiparasitics or use deviating from the instructions given in the SPC may increase the resistance selection pressure and lead to reduced efficacy. The decision to use the product should be based on confirmation of the parasitic species and burden, or of the risk of based on its epidemiological features, for each individual animal.

No data on the effect of bathing/shampooing on the efficacy of the product in cats and ferrets are available. However, based on information available for dogs shampooed as from 2 days after application of the product, it is not recommended to bath animals within 2 days after application of the product.

There may be an attachment of single ticks. For this reason a transmission of infectious diseases cannot be completely excluded if conditions are unfavourable.

Fleas from pets often infest the animal's basket, bedding and regular resting areas such as carpets and soft furnishings which should be treated, in case of massive infestation and at the beginning of the control measures, with a suitable insecticide and vacuumed regularly.

Other animals living in the same household should also be treated with a suitable product.

### Special precautions for safe use in the target species:

Avoid the contact with the animal's eyes.

It is important to make sure that the product is applied to an area where the animal cannot lick it off and to make sure that animals do not lick each other following treatment.

The potential toxicity of the product for kittens of less than 8 weeks of age in contact with a treated queen is not documented. Special care should be taken in this case.

### Special precautions to be taken by the person administering the veterinary medicinal product to animals:

This product can cause mucous membrane, skin and eye irritation. Therefore, contact of the product with mouth, skin and eyes should be avoided.

People with a known hypersensitivity to fipronil or (S)-methoprene, or alcohol should avoid contact with the veterinary medicinal product. Avoid contents coming into contact with the fingers. If this occurs, wash hands with soap and water.

After accidental exposure the eye should be rinsed carefully with plain water.

Wash hands after use.

Treated animals should not be handled until the application site is dry, and children should not be allowed to play with treated animals until the application site is dry. It is therefore recommended that animals are not treated during the day, but should be treated during the early evening, and that recently treated animals are not allowed to sleep with owners, especially children.

Do not smoke, drink or eat during application.

### Special precautions for the protection of the environment:

See section "Special precautions for disposal".

### Pregnancy and lactation:

The veterinary medicinal product can be used during pregnancy in cats. For treatment during the lactating period, see above.

Use only according to benefit/risk assessment by a responsible veterinarian in ferrets.

### Overdose:

Do not overdose.

The risk of experiencing adverse events may however increase when overdosing (see section 7 “Adverse events”).

#### Cats:

No adverse events were observed in target animal safety studies in cats and kittens aged 8 weeks and older and weighing about 1 kg treated once a month at five times the recommended dose for six consecutive months.

Itching may occur following treatment.

Overdose application of the product will cause a sticky appearance of hairs at the treatment spot.

However, should this occur, it will disappear within 24 hours post application.

#### Ferrets:

In ferrets aged 6 months and older and treated once every 2 weeks for four treatments, at five times the recommended dose, body weight loss was observed in some animals.

## **7. Adverse events**

Cats and Ferrets:

**Very rare (<1 animal / 10,000 animals treated, including isolated reports):**

Application site reactions (skin scaling<sup>1</sup>, hair loss<sup>1</sup>, itching<sup>1</sup>, reddening<sup>1</sup>). Generalised itching or hair loss. Hypersalivation<sup>2</sup>, vomiting. Increased sensitivity to stimulation<sup>3</sup>, depression<sup>3</sup>, other nervous signs<sup>3</sup>.

<sup>1</sup> Transient

<sup>2</sup> If licking occurs, a brief period of hypersalivation may be observed due mainly to the nature of the carrier.

<sup>3</sup> Reversible

Reporting adverse events is important. It allows continuous safety monitoring of a product. If you notice any side effects, even those not already listed in this package leaflet, or you think that the medicine has not worked, please contact, in the first instance, your veterinarian. You can also report any adverse events to the marketing authorisation holder or the local representative of the marketing authorisation holder using the contact details at the end of this leaflet, or via your national reporting system: {national system details}.

## **8. Dosage for each species, routes and method of administration**

Spot-on use.

Underdosing could result in ineffective use and may favour resistance development.

The minimum dose is 5 mg/kg bw of fipronil and 6 mg/kg bw of (S)-methoprene, corresponding to one pipette of 0.5 ml per cat. In the absence of safety studies, the minimum treatment interval is 4 weeks.

The dose is 50 mg of fipronil and 60 mg of (S)-methoprene per ferret, corresponding to one pipette of 0.5 ml per ferret. The minimum treatment interval is 4 weeks.

For infestations with fleas and/or ticks, the need for and frequency of re-treatment(s) should be based on professional advice and should take into account the local epidemiological situation and the animal's lifestyle.

#### **9. Advice on correct administration**

Method of administration: see outer packaging.

#### **10. Withdrawal periods**

Not applicable.

#### **11. Special storage precautions**

Keep out of the sight and reach of children.

**Do not store above 25°C. Store in the original package.**

Do not use this veterinary medicinal product after the expiry date which is stated on the carton after Exp. The expiry date refers to the last day of that month.

#### **12. Special precautions for disposal**

Medicines should not be disposed of via wastewater or household waste.

This veterinary medicinal product should not enter water courses as fipronil and (S)-methoprene may be dangerous for fish and other aquatic organisms. Do not contaminate ponds, waterways or ditches with the product or empty containers.

Use take-back schemes for the disposal of any unused veterinary medicinal product or waste materials derived thereof in accordance with local requirements and with any applicable national collection systems. These measures should help to protect the environment.

Ask your veterinary surgeon or pharmacist how to dispose of medicines no longer required.

#### **13. Classification of veterinary medicinal products**

AT, BG, CZ, DE, DK, ES, ET, FI, FR, HR, HU, IT, LT, LV, MT, NL, PL, PT, RO, SI, SK, SV:  
Veterinary medicinal product not subject to prescription.

CY, GR, IE, NO, UK(NI):  
Veterinary medicinal product subject to prescription.

#### **14. Marketing authorisation numbers and pack sizes**

To be completed nationally.

Blister card of 1 x 0.5 ml pipette  
Box of 1 blister card of 3 x 0.5 ml pipettes  
Box of 1 blister card of 4 x 0.5 ml pipettes  
Box of 2 blister cards of 3 x 0.5 ml pipettes

Not all pack sizes may be marketed.

**15. Date on which the package leaflet was last revised**

{MM/YYYY}

Detailed information on this veterinary medicinal product is available in the Union Product Database (<https://medicines.health.europa.eu/veterinary>).

**16. Contact details**

Marketing authorisation holder and contact details to report suspected adverse reactions:  
To be completed nationally.

Overdose application of the product will cause a sticky appearance of hairs at the treatment spot.

However, should this occur, it will disappear within 24 hours post application.

#### Ferrets:

In ferrets aged 6 months and older and treated once every 2 weeks for four treatments, at five times the recommended dose, body weight loss was observed in some animals.

## **8. ADVERSE EVENTS**

### **Adverse events**

Cats and Ferrets:

#### **Very rare (<1 animal / 10,000 animals treated, including isolated reports):**

Application site reactions (skin scaling<sup>1</sup>, hair loss<sup>1</sup>, itching<sup>1</sup>, reddening<sup>1</sup>). Generalised itching or hair loss. Hypersalivation<sup>2</sup>, vomiting. Increased sensitivity to stimulation<sup>3</sup>, depression<sup>3</sup>, other nervous signs<sup>3</sup>.

<sup>1</sup> Transient

<sup>2</sup> If licking occurs, a brief period of hypersalivation may be observed due mainly to the nature of the carrier.

<sup>3</sup> Reversible

Reporting adverse events is important. It allows continuous safety monitoring of a product. If you notice any side effects, even those not already listed on this label, or you think that the medicine has not worked, please contact, in the first instance, your veterinarian. You can also report any adverse events to the marketing authorisation holder or the local representative of the marketing authorisation holder using the contact details on this label, or via your national reporting system: {national system details}.

## **9. DOSAGE FOR EACH SPECIES, ROUTES AND METHOD OF ADMINISTRATION**

### **Dosage for each species, routes and method of administration**

Spot-on use.

Underdosing could result in ineffective use and may favour resistance development.

Cats:

The minimum dose is 5 mg/kg bw of fipronil and 6 mg/kg bw of (S)-methoprene, corresponding to one pipette of 0.5 ml per cat.

Ferrets:

The dose is 50 mg of fipronil and 60 mg of (S)-methoprene per ferret, corresponding to one pipette of 0.5 ml per ferret.

For infestations with fleas and/or ticks, the need for and frequency of re-treatment(s) should be based on professional advice and should take into account the local epidemiological situation and the animal's lifestyle.

## **10. ADVICE ON CORRECT ADMINISTRATION**

### **Advice on correct administration**

- 1- Take the pipette out of its packaging.
- 2- Hold the pipette upright. Tap the narrow part of the pipette to ensure the contents remain within the main body of the pipette. Snap back the tip.
- 3- Part the coat on the back of the animal at the base of the neck in front of the shoulder blades until the skin is visible. Place the tip of the pipette on the skin and squeeze the pipette several times to empty its contents completely and directly onto the skin in one spot.

## **11. WITHDRAWAL PERIODS**

**Withdrawal periods:** not applicable.

## **12. SPECIAL STORAGE PRECAUTIONS**

### **Special storage precautions**

Do not store above 25°C. Store in the original package.

Keep out of the sight and reach of children.

Do not use this veterinary medicinal product after the expiry date which is stated on the blister card after Exp. The expiry date refers to the last day of that month.

## **13. SPECIAL PRECAUTIONS FOR DISPOSAL**

### **Special precautions for disposal**

Medicines should not be disposed of via wastewater or household waste.

This veterinary medicinal product should not enter water courses as fipronil and (S)-methoprene may be dangerous for fish and other aquatic organisms. Do not contaminate ponds, waterways or ditches with the product or empty containers.

Use take-back schemes for the disposal of any unused veterinary medicinal product or waste materials derived thereof in accordance with local requirements and with any applicable national collection systems. These measures should help to protect the environment.

Ask your veterinary surgeon or pharmacist how to dispose of medicines no longer required.
